## LEGAL NOTICE\*

The information presented and developed in this document is not necessarily detailed, nor does it imply an educational function. Nor is it intended to establish any contractual relationship. It is only an illustrative document, which describes, for informational purposes, the characteristics of the NFT-Royal Token ecosystem of possibilities.

The reader is warned that the decisions he/she makes in this area, as well as the use of the suggested tools, imply risks at his/her own responsibility.

# EXCERPT

This document presents a possible and unique vision for the different business opportunities or applications that the **NFT-Royal Token** ecosystem can offer. A cutting edge project with projection in the world of NFT's, Gaming, Crypto Casino and Marketplace, just to mention a few examples.

Over time, technological innovations have permeated different areas of human participation; decentralized finance, online gaming, activity management, trading through social networks, or the world of cryptocurrencies, are proof of this.

NFT-Royal Token emerges as a development capable of adapting to a world in constant transformation. Its superior technology allows it to understand, adapt and anticipate the characteristics of areas where technology has occupied, especially in recent months, a place of unquestionable relevance.

NFT-Royal Token is an intelligent ecosystem. A project that, thanks to the use of blockchain technology and crypto developments, offers security, transparency and reliability to each of its customers and partners. This feature is detailed during this content whitepaper. In addition, it provides a series of tools and a state-of-the-art infrastructure, which allows the development of NFT's, so that participants can take full advantage of the business and profit opportunities that only **NFT-Royal Token** offers.

Until now, the field of cryptocurrencies and decentralized finance has been a taboo for most people around the world. However, day by day the challenges in the aforementioned areas have made various sectors of the population interested in learning more about a technology that is becoming more and more tangible in the everyday world.

In this thirst for knowledge, NFT-Royal Token seeks to bring the possibilities of this technology to as many customers and partners as possible, and in doing so, grow even more, because innovation does not stop.

# A BRIEF REVIEW: HISTORY OF THE BLOCKCHAIN

The invention of *blockchain* technology is a recent event. However, thanks to the different business options and usability applications it provides, it is considered one of the most disruptive innovations of the 21st century.

Decentralized finance, manufacturing, education or gaming are just some of the sectors that have been impacted in an excellent way by this technological development. And what surprises the experts is the growth projection that is still to be achieved in the coming years to consolidate itself as one of the most important transformations in the history of mankind, at a technological level.

In 2008, with the development of the world's most popular cryptocurrency, Bitcoin, the blockchain was born. A technology that combined existing network technology (P2P) with advanced cryptographic techniques, hence the term cryptocurrency. One of the purposes of these developments was to ensure, among other things, transparency and security for users, through servers and optimal management of individual data of all customers.

Since then, the improvement and constant updating of technologies has allowed *Blockchain* networks to become more widely known and used.

This means that a greater number of people can get to know, become familiar with and start working with blockchain, according to the applications or services of their interest. As of 2015, various projects have emerged in the world to take full advantage of the possibilities of this technology, an example of which is the one that emerged in China, known as NEO, presented at the time as the first open source and decentralized blockchain platform.

The improvements did not stop: with the launch of Ethereum blockchain it has been possible to support smart contracts, which are used for different options. And today, this blockchain processes the largest amount of daily transactions due to its powerful capacity to support smart contracts and decentralized applications.

In the coming years, *blockchain* technology is expected to establish itself as an ecosystem in which the Internet of Things, developers and even private sector companies will have increasing participation.

# BLOCKCHAIN TECHNOLOGY

Analyzing a technological development should be simple. A task focused on answering one question: what are the contributions or solutions provided by this technological advance? In the case of blockchain technology, the question can be answered with apparent simplicity and in a concrete way.

Unlike traditional internet models, blockchain technology provides greater security and transparency of transactions, because they are carried out through direct and decentralized connections.

Blockchain is considered a disruptive technology. Especially because, thanks to it, the business world and the financial sector is changing. Below, we share some of its advantages for a timely recognition by our readers:

- ◆ It allows the permanent recording of transactions in a decentralized network.
- ◆ It is dynamic, because the flow of new information is constant.
- ◆ The blockchain is versatile, because through various algorithms, specific actions can be programmed, determined in advance by the participants.
- ◆ It reduces the operational risks of companies, thus representing a lower operational risk.
- ◆ The solutions are performed in real time and, thanks to smart contracts, transactions can be programmed and encrypted.
- ◆ Facilitates automated settlements or reconciliations, and also reduces human errors during operations.
- ◆ It improves operational efficiency. This happens because digitization and automation reduce capital costs, compliance costs and risk management costs..

In conclusion, *blockchain* technology offers attractive benefits for those who rely on it: transparency, security, optimal automation and competitive advantages never seen before in various business areas, which in turn allows the creation of new markets

# NFT-ROYAL TOKEN, A SMART, MULTIFUNCTIONAL ECOSYSTEM

According to data provided **by IoT Analytics**, it is estimated that **by 2025 the number of devices connected to the Internet will increase from 10 billion to an incredible 22 billion.** And this figure is only an approximate number. To really dimension the challenges that this means, but at the same time, the opportunities that this represents; force to rethink the competitiveness of companies and governments to operate efficiently.

When talking or referring to technological development, it is not enough to think about the number of devices; we must go a step further. To look holistically, broadly. To be able to understand everything and get the most out of it by providing solutions that societies need and in this sense, we have taken on the task of planning, developing and perfecting NFT-Royal Token.

An intelligent and multifunctional ecosystem that capitalizes in the best way the potential of technological innovation, by providing different solutions in an exclusive system of benefits and possibilities in the field of DeFi developments.

Created on the **BlockChain de Binance Smart Chain (BSC)**, NFT-Royal Token offers several benefits such as:

- ◆ **Fast and simultaneous transactions.**
- ◆ **Compatible with EVM.**
- ◆ **Ideal support for Erc-20 and Bep-20 tokens.**
- ◆ **Compatible with different business models.**
- ◆ **Low cost operations.**
- ◆ **Fast transaction verification.**

In addition, as one of its added values, **NFT-Royal Token is supported by:**

Both are leaders of the DeFi protocols, besides being also among the most popular globally, thanks to the volume of transactions it allows in the world of decentralized finance. Of course, both have liquidity for Binance Coin (BNB), BUSD and others. And a significant number of users prefer it thanks to the benefits it provides:

- ◆ **It is fast and constantly updated.**
- ◆ **It uses an automatic model called Automated Market Maker (AMM).**
- ◆ **Allows trading with a liquidity pool**
- ◆ **Provide liquidity or earn various rewards.**

And if that isn't enough, it allows you to enable a wider range of functions, among which you can activate the option: Unlock wallet and make the most of other options that our intelligent ecosystem puts within your reach, by interacting and making use of different solutions that we explain below:

## METAMASK

METAMASK is a software that works as a convenient extension to any web browser and simplifies the use of Ethereum blockchain DApps. Also known as plug in, this extension allows users to use the decentralized applications of this blockchain (Ethereum) in an easy way, no matter what their favorite browser is.

METAMASK offers support for Chrome, Firefox, Opera and Brave browsers. And thanks to working in the most popular browsers, Metamask has contributed to a greater number of people knowing and working with DApps.

## Trust Wallet

TRUST WALLET is perfect for those who are just starting in the world of cryptocurrencies. It is a "wallet" that allows you to store, buy, sell, exchange or use DApps, (decentralized applications), within the same wallet. Easy and uncomplicated!

TRUST WALLET is used by more than 9 million users worldwide. A feature that makes it one of the most reliable wallets in the market. And among its great attractions, the following possibilities stand out:

- ◆ You earn cryptocurrencies while you hold.
- ◆ Personal information is not stored.  
Allows you to exchange cryptocurrencies without leaving the application.
- ◆ It is multi-asset. This means that it allows you to have more than 40 different blockchains, which translates into thousands of compatible tokens and cryptocurrencies.
- ◆ It offers security against hackers.
- ◆ You can trade or swap cryptocurrencies.

These are just some of the many advantages it offers.

TRUST WALLET belongs to the Binance ecosystem, and is a secure option for users who wish to hold their funds outside the ecosystem itself.

**Do you want more reasons to trust the smart and multifunctional NFT-Royal Token ecosystem? If so, learn about the business opportunities we put at your fingertips.**

**BUSINESS**

# **OPPORTUNITIES**

We have reviewed and emphasized the constant improvement of technology; its applications and the impact it has already begun to have in different areas of our daily lives. For this reason, NFT-Royal Token emerges as a multifunctional ecosystem, capable of responding to the challenges and demands of rapidly growing markets.

*Gaming* is one of these markets with a meteoric rise. Today, this sector moves more than one billion dollars and that's not all, because according to analysts, this figure will continue to increase over the next few years.

NFT-Royal Token aims to build on this momentum to make the gaming market an innovative space and, at the same time, offer a secure, transparent, attractive and much more dynamic entertainment environment.

NFT-Royal Token is an ecosystem that wants to take *gaming* services to the next level, to contribute to a broad improvement of this important entertainment sector. And, as if that weren't enough, to add to the growth of an activity that positively impacts the world, by helping users to spend fun moments, while becoming familiar with cryptocurrencies.

As a result, NFT-Royal Token is a modern solution that meets the needs of a growing and globally recognized market.

# WELCOME TO THE BOOM OF CRYPTO GAMING AND CRYPTO CASINOS

PCountries like Venezuela, Vietnam and the Philippines have found in gaming a gold mine, because thanks to video games based on NFT blockchain technology, not only gamers, but also citizens have turned to this sector to generate extra income. And they succeeded!

Since its origin in 2017, various projects in the world of video games, based on blockchain technology and NFT (non-fungible tokens), expectations were few. However, and against all odds, this sector has gained popularity by leaps and bounds and it seems that it won't stop.

According to various media, and portals specialized in the world of cryptocurrencies, some video game titles such as: *Alien Worlds, Galaxy Blocks, Splinterlands, My Defi Pet or CryptoBlades Game*, have become the sensation of the moment and in doing so, have contributed to the increase in the value of tokens, which also increases sponsorship and attracts the attention of a much wider audience.

According to various media, and portals specialized in the world of cryptocurrencies, some video game titles such as: *Alien Worlds, Galaxy Blocks, Splinterlands, My Defi Pet or CryptoBlades Game*, have become the sensation of the moment and have contributed to the increase in the value of tokens, which also increases sponsorship and attracts the attention of a much wider audience.

However, the benefits provided by developments such as blockchain technology are already influencing the way in which governments, public and private agencies, as well as small and medium-sized companies are involved with the use of personal data, security or new business opportunities that are beginning to be generated around them.

**NFT-Royal Token is an intelligent and multifunctional ecosystem.** After thoroughly studying the gaming market, and the boom it has had during the last years, but above all the projections it offers for the future, NFT-Royal Token has distinguished an ideal area of opportunity to provide security, transparency and reliability to make available to entertainment spaces in search of blockchain technology, cryptocurrencies and other DeFi developments.

**And NFT-Royal Token is ready to take on the challenge of this very new field.**

# GROWTH PROJECTION

NFT - Royal Token is powered by Bep-20 blockchain technology. It is a token developed specifically for the entertainment and gaming market, a feature that allows it to perform well with an incredible number of opportunities.

It also provides an immediate response to the gaming market, where users are waiting for greater security, transparency and power in gaming services. Once this happens, this sector grows in demand, trust and participation.

It's expected that over the next 3 to 5 years, the number of people interested in the gaming world will continue to increase. Above all, because to participate in this sector you do not need a workstation and you can play from the comfort of a cell phone, a laptop or a tablet.

Thinking about it is no longer an option. Participating and betting on a growing sector is an opportunity that cannot be missed and NFT-Royal Token is a card with a real chance of success.

# NFT ROYAL TOKEN

## MARKETPLACE

Digital assets are revolutionizing the art world, because they provide a constant flow that is very attractive for trading. Personalities such as English footballplayer Michael Owen, painter Frank Holliday or visual artist Trevor Janes are already frequent participants in NFT's Marketplace.

Since Binance began developing this platform focused on the work of artists, musicians, collectors, athletes and other personalities so that they could monetize their creativity in a fair and affordable way, the project has not stopped growing.

Binance NTF Marketplace allows creators and artists to receive earnings in two modes: Premium: with 90% of the profits, and in a secondary marketplace they get 99% of the profits. Plus, in an additional scheme they get 1% of the royalties thanks to the following transactions, as long as the work remains on Binance.

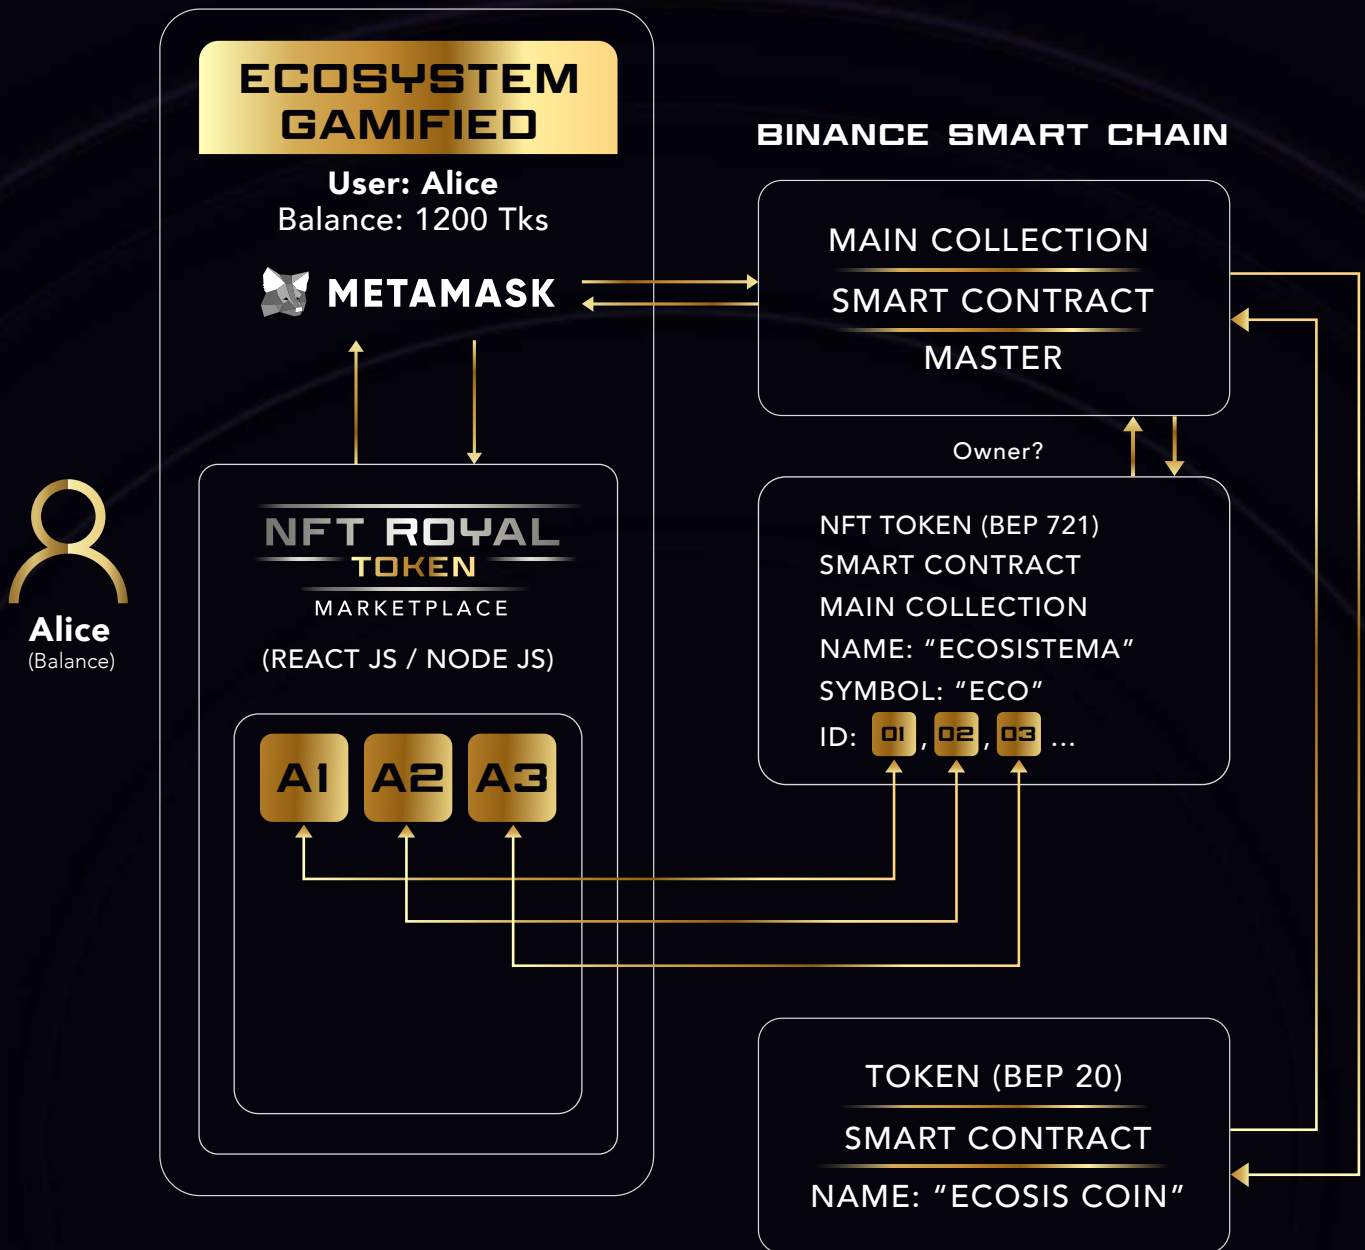

An NFT is a non-fungible digital token. When they are created, they are made in a unique and unrepeatable way, which guarantees their originality. For this reason, a large part of the community of artists or creators have started to use them to sell their works. Being unique and unrepeatable digital assets, they can be bought or sold as any property and are seen as certificates of ownership of *virtual assets*.

Regarding NFT-Royal Marketplace, the NFT's of this community are created by leading professionals in the sector and integrate very attractive collections of high artistic value with an excellent possibility of revaluation over time. This means that their value increases.

Here is an exercise for illustrative purposes: imagine you are a creator and you want to sell your art. You can do it in a simple way. Just download Metamask and add this extension to your browser, so you can store your cryptoassets in it.

# FLOWCHART

And once you log in, you have immediate access to the NFT Marketplace. An NFT Marketplace can be programmed in two different languages: react and snoot. Once the system checks your Wallet balance, it shows you a selection of NFT's that you could buy. Just as it happens with an E-commerce platform.

To put it another way: you can see "the balance" and based on that amount the system gives you a sample of what you can buy.

Once you have reached that point; you have two possibilities

- 1.- You can buy an NFT.
- 2.- Create and load your own NFT.

If you decide to sell your own NFT (option 2), you must click on the Binance Smart Chain button and start uploading all the information related to your product, to provide as many details as possible: if it is a song, a high resolution image, etcetera.

Once uploaded you can name your NFTs. You can create your collection, organize or choose your categories and once you have uploaded and have everything ready, you will have to take into account the cost per gas (the unit of measurement used to represent the cost of doing business).

Something important to remember is that NFT-Royal Marketplace will charge you a commission for each NFT you want to put on sale, as well as a minimum percentage for each sale achieved. This already happens in e-commerce platforms such as Mercado Libre or Amazon. So it is much simpler than you think. NFT-Royal Marketplace operates everything in 4 simple steps. Just put them into practice and participate immediately.

### SET UP YOUR WALLET

Once you have set up your Wallet, connect it to Royal Marketplace..

### YOU GO FIRST COLLECTION

Select the option "My gallery" and personalize your collection. Give it your touch!

### INTEGRATE YOUR NFT'S

Share your creativity with the world! Upload your NFT's. They can be audio, image, video or 3D art, give them a witty or funny name or title, and personalize them!

### START EARNING WITH THEM

The decision is yours! Auctions, listings with a fixed price or a variable price, you decide how to sell your NFT's and we guide you to make it possible.

# WALLET STAKING

**Act 1:** Imagine you are the hero of a video game and your mission is to keep a certain amount of money in a cryptocurrency wallet.

**Second act:** by doing so, you support the security and transactions of a blockchain chain.

**Third act:** once you leave the fund in the wallet, you lock this crypto deposit and start earning different rewards.

## What was the play called? Proof of Stake (PoS).

*Staking* is another way to generate profits or obtain benefits in the world of cryptocurrencies. However, staking not only benefits the community with the distribution of profits, but also enables consensus in a decentralized way. It makes the process more democratic!

For example, the more coins are kept locked in a "deposit", the higher the probability of obtaining profits or benefits. It all depends on the participants. Under this logic, random profits are determined by the amount of funds staked.

It's estimated that, very soon, the scalability of blockchains will inevitably advance thanks to this process. In other words, it will grow and improve its rewards. The truth is that the trend of NFTs is already unstoppable. Moreover, by making it able to generate more tokens thanks to staking, the liquidity of the project is guaranteed.

*Say goodbye to doubts and start winning with NFT-Royal Token!*

# CONCLUSIONS

The world is transforming every second. The consolidation of blockchain technologies as well as advances in the decentralized finance sector is already impacting and reshaping the world as we know it.

It's a growing sector. A field with multiple opportunities and growth options for those who are interested, learn and begin to develop their skills to get to know it and make the most of its possibilities.

At this point, NFT-Royal Token emerges as a disruptive, innovative and ambitious ecosystem that seeks to bring to as many people as possible, a new way to generate income through a secure, transparent and increasingly reliable technology. Through gaming, NFT's Marketplace or staking, NFT-Royal Token seeks to be the spearhead that helps build the conversation around these new ways of understanding the world...

At a time in history when there are millions of questions, and a pandemic has forced us to rethink the course of our interaction as a society, NFT-Royal Token emerges as a solution. A multifunctional and intelligent ecosystem to meet the challenges of the 21st century.

**WELCOME TO NFT-ROYAL TOKEN.**
